

Single Dealer Platforms (SDPs) are increasing in popularity due to the flexibility and streamlining they bring to the distribution process. In order to open new supply channels for clients, the current market is leaning towards wholesale distribution. This trend calls for a service model that allows direct access to new markets by removing intermediary channels, thereby speeding up processes.

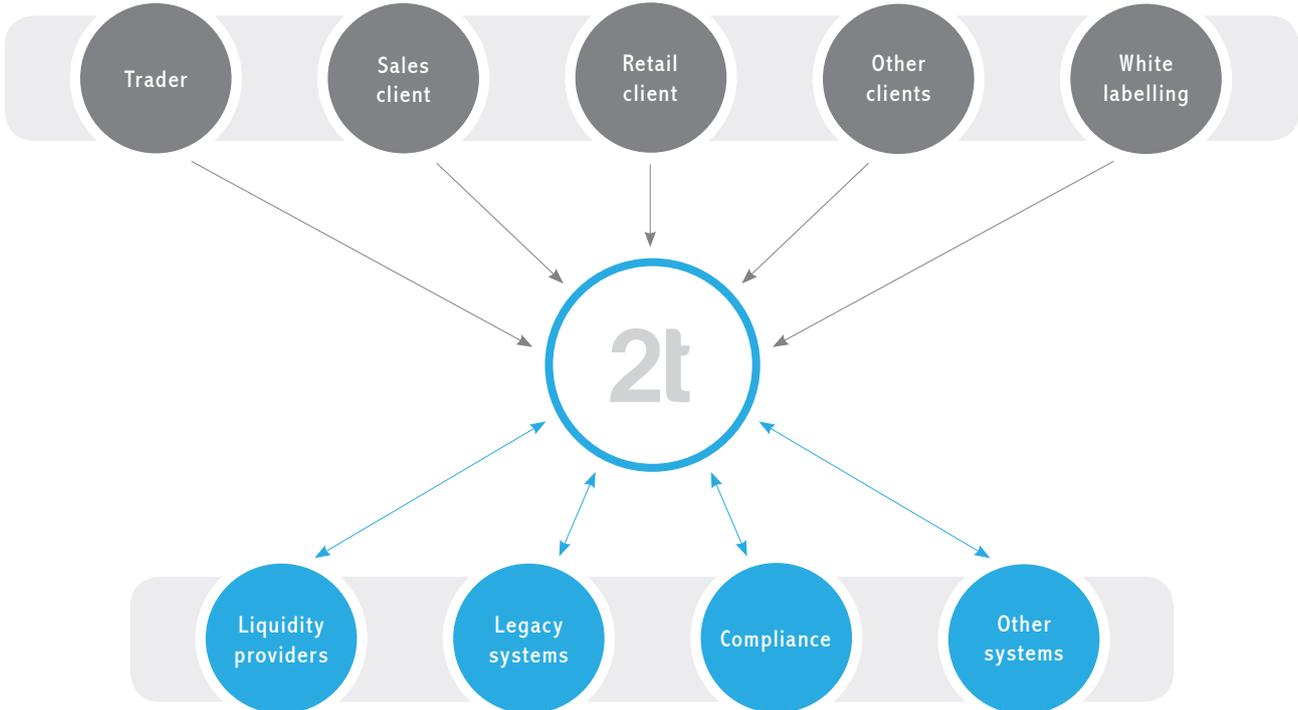

Optimissa has created a proprietary platform that offers electronic multi-asset distribution and workflow centralisation. 2Trade® is an intermediary layer between the multiple channels that you might already support, with a flexible architecture adaptable to any environment. Leveraging our experience in electronic markets development, we have designed a simple and comprehensive system that enables our clients to expand their distribution desks.

### Architecture

2Trade has a powerful service layer that enables connectivity with all relevant systems. This architecture allows for scalability, user profiling, and STP interaction with multiple channels. The system will be tailored to your needs with readily available connectors to your chosen standard market platforms.

### Multi-asset platform

FX · Fixed Income · Money Markets · Equities

## Features

The main business processes can be created, monitored and managed in one electronic platform, from pricing and validation to real-time execution. The application allows for flexibility and is fully adaptable to the workflows used by different institutions.

### Pricing

- Connectivity with multiple electronic markets
- Wholesale and retail pricing
- Client and tier management
- Internal distribution of prices

### Validation

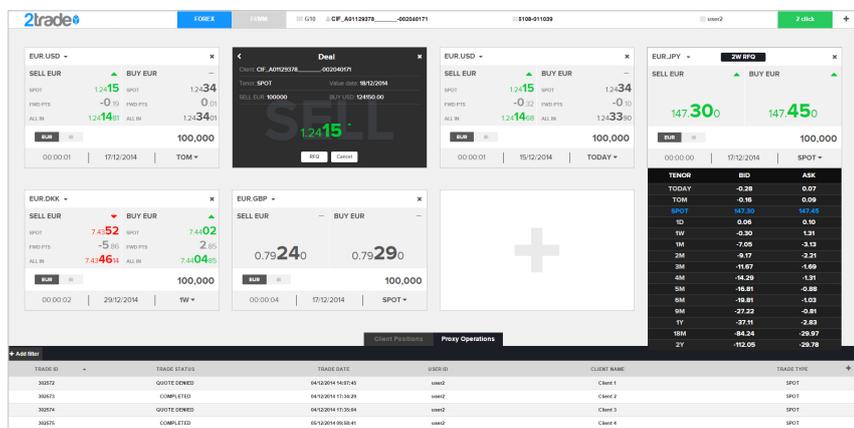

- Pre-trade workflows
- Credit limit checks
- Sanity checks
- Compliance features: MiFID, EMIR, etc.

### Booking

- Real-time pricing
- Request for Quote management
- Real-time streaming
- Order workflow management

## Interface

The main screen appears empty by default, allowing new users to tailor it by adding the currency pairs or fixed income, equity and money market products they need. This unique interface has a responsive design that, when accessed from tablets and smartphones, returns optimised layouts depending on the device used.

## Benefits

2Trade exponentially increases the accessibility to different markets, making it possible to reach retail clients. It also optimises business and IT resources by giving them the independence each department requires.

### Scalability

Increased client range, ability to widen access to different distribution channels.

### Flexibility

Ability to accommodate clients' own workflows, in-house risk management.

### Independence

Independent functionality from the pricing engines in use.

### Connectivity

Flexible connectivity to a variety of electronic markets and pricing engines, bespoke integration.
